

# Brodgar Horn

Rear Firing Olson-style Double Path Manifold Horn for the Mark Audio Alpair 11ms

Brodgar, named for the neolithic British stone circle in the Orkney Islands, is a tall and elegant rear-firing back-horn engineered for the Mark Audio Alpair 11ms.

Designed for use near a rear-boundary wall, Brodgar employs Olson style manifold expansion in a quasi-hyperbolic profile, offering response from ~35Hz - 20KHz, with an 8ohm nominal impedance.

Suitable for general listening in modest - larger spaces, with further increases in power handling, and detail over Silbury. Massive scale for a modest driver, with a neutral tonal balance.
